Quality care

with

compassion

Robert Wright, MD has been serving the Pierce County community's surgical needs since 1990, employing advanced technology and surgical techniques while providing the highest quality surgical care with compassion.

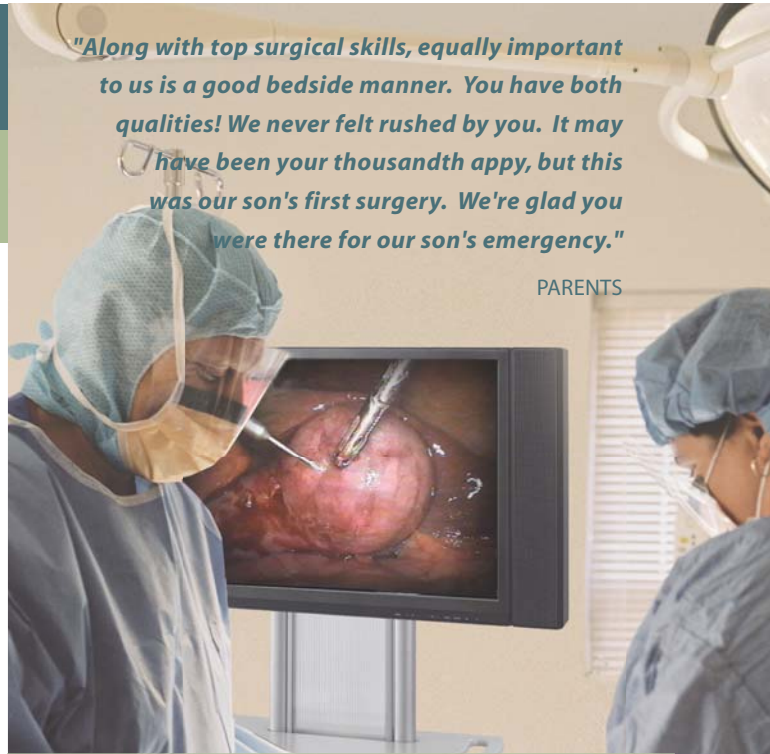

"For most people, the prospect of surgery is unsettling. My desire is to help you through surgery in the most supportive manner. I will listen to your symptoms, and I will review your imaging and laboratory studies to determine the optimal treatment. If surgery is needed, we will work with you to schedule an optimal time." DR. WRIGHT

"I felt very comfortable as a patient because you explained the procedure so precisely and took time to make sure I understood the operation."

PATIENT

"Along with top surgical skills, equally important to us is a good bedside manner. You have both qualities! We never felt rushed by you. It may have been your thousandth appy, but this was our son's first surgery. We're glad you were there for our son's emergency."

PARENTS

Meridian Surgery Center

In 2001, Dr. Wright established The Meridian Surgery Center for *Hernia & Minimally Invasive Surgery*, providing the first private center in Pierce County for general surgery, offering advanced laparoscopic procedures. "This Center offers surgical procedures for my patients in a private setting with an experienced and friendly nursing staff, Board Certified Anesthesiologists, and top-notch, personalized care for day surgical procedures."

Dr. Wright and staff have performed over 4000 procedures in this outpatient center. His patients received care offering:

- greater patient privacy
- less exposure to hospital-related risks
- overall reduced health care costs.

If surgery is needed and you qualify, Dr. Wright may offer this facility for your surgery operative care. After surgery, Dr. Wright and his staff will guide your care and follow up until the healing process is complete.

— Dr. Wright
